

CANNA

The solution for growth and bloom

BOOST

ACCELERATOR

HOLLAND'S BEST SELLING BLOOM ACCELERATOR

CANNABOOST Accelerator has already taken the Dutch home garden market by storm and is now set to revolutionise the Australian booster industry. CANNABOOST Accelerator radically accelerates the blooming response, improves quality and significantly boosts flower yield in rapidly growing annual plants.

THICKER, HARDER FLOWERS FASTER

Plants flowered with CANNABOOST increase their rate of photosynthesis almost immediately and start quickly forming numerous, tight and heavy clusters of flowers that continue for many weeks. The unique combination of elements, not found in any other bloom booster, help your plants finish the flowering cycle up to a week and a half earlier - that's 20% faster - without the usual loss in weight.

NOT JUST HIGHER YIELDS

Something very special about CANNABOOST is that it does not just guarantee higher yields but also a better taste. Something extra for the CANNA grower!

SUITABLE FOR EVERY GROWING MEDIUM

CANNABOOST can be used in every cultivation system in combination with every kind of feeding. In addition to adding CANNABOOST to the nutrient solution, it can also be used as a leaf spray. The advantage of this is that the plant can absorb the flowering booster directly via the leaves.

EVEN HIGHER YIELDS USING CANNA PK 13-14

CANNABOOST is not a nutrient but a nutrient additive that radically accelerates the plant's rate of photosynthesis. CANNABOOST is best partnered with CANNA PK 13-14 and CANNA nutrients for results that you have to see to believe!

SUPERIOR RIPENING AND PROTECTION

CANNABOOST is rich in natural flowering regulators that not only optimise the distribution of the flowering stimulants in the booster itself but also the flowering substances and energy that are naturally available within the plant. This enables the flowers to develop uniformly and to mature to their full potential. Thanks to the improved energy regulation, the plant has sufficient reserves available to resist pathogens and help protect against any disasters prior to harvesting.

PHENOMENAL FLAVOUR AND BOUQUET

Judging a good harvest these days is not just based on the kilos produced. You may have already seen this reversal in the cultivation of Dutch tomatoes and cucumber. This is now a concern for the serious grower too. Quality is starting to play a much more important role. By increasing the rate of plant photosynthesis, CANNABOOST not only guarantees a higher yield but also a greater increase in flower sugar production. This awards the grower with a sweeter taste together with superior concentrations of natural flavour and aroma.

RESERVE A BOTTLE TODAY

CANNABOOST is the new boost generation. It guarantees the shortest harvests and the heaviest, thickest, hardest flowers - ever! This Dutch flowering booster is the market leader and sets the benchmark for this popular type of additive. Available now from all leading hydroponic shops. Try this proven booster for yourself today.
