

Superior certified 100% organic results every time.

BIOCANNA® has initiated a world first for organic horticulture with the introduction of its certified 100% organic BIO VEGA (Grow) and BIO FLORES (Bloom) liquid fertilisers from Holland that are crafted entirely from fermented plant extracts ensuring no animal proteins enter the food chain of the plant. Increasing numbers are realising that growing organically is the way of the future. The most important factor about organic horticulture is a respect for everything that is alive, basing it on living ecological systems and cycles, work with them, emulate them and help sustain them. In practice, it should avoid the use of fertilisers, pesticides, animal drugs and food additives that may have adverse health effects to sustain and enhance the health of ecosystems and organisms from the smallest in the soil to human beings. Finally BIO VEGA and BIO FLORES make it possible to grow 100% organically whilst guaranteeing you lush, vigorous growth and superior fruit and flower size every time with an enhanced sweetness and flavour.

ORGANIC FARMING

The discovery of fertiliser contributed enormously to people's prosperity. Unfortunately, there are also disadvantages to modern farming such as the deterioration of the soil quality and the environment. Dissatisfaction with this led to two new farming movements in the last century, that is, organic farming and biodynamic farming. The aim of organic farming is to generate produce in a sustainable manner whilst in harmony with nature. These two basic organic farming principles will help to realise and maintain this:

1. Non-use of chemical pesticides and fertilisers.
2. Aim for a wider biodiversity.

The implementation of these principles will create a natural growing environment with a quality structure and healthy microflora. BIO VEGA and BIO FLORES support these principles.

INSIST ON CERTIFIED ORGANIC!

The Control Union Certifications (CUC) manages organic certification worldwide. CUC issues the EKO quality mark. This quality mark is your absolute guarantee that the product is genuine organic - produced with respect for nature and the environment. An organic product does not contain any chemical fertilisers, chemical pesticides, chemical or synthetic flavours, colours, preservatives, or any genetically modified organisms. BIO VEGA and BIO FLORES are the first 100% vegetable based liquid fertilisers for cultivating on peat based mixes like Terra Professional and soil that are manufactured, validated and documented according to the strict CUC organic certification program and the latest European Union organic production standards EEC 2092/91 to facilitate manufacturer compliance with current Good Organic Manufacturing Practices (cGOMP's).

NATURALLY ORGANIC

BIO VEGA and BIO FLORES are a completely new class of intelligent organic fertilisers from Holland. They set the benchmark for certified organic fertilisers by utilising an innovative fermentation process. Fermentation breaks down complex substances utilising microorganisms. After years of research into special microorganisms and raw vegetable produce, BIOCANNA® has succeeded in developing a fully controlled fermentation process that guarantees a consistent product with a carefully

integrated and balanced formulation of the purest mineral and organic ingredients. Thanks to BIOCANNA's revolutionary fermentation process BIO VEGA and BIO FLORES increase the plants natural immune system to superior levels to protect against soil pathogens and enhance overall plant growth, pH stability and chemical reactions within the plant to guarantee a healthier, more powerful plant.

LATEST HIGH-TECH PLANT RESEARCH

Previously it was impossible to match the yields and growth rate of chemically grown plants using 100% organic liquid fertilisers because organic fertilisers existed only in long-carbon chains. BIOCANNA's research scientists, using the latest high-tech Dutch plant research, have succeeded in converting these long-carbon chains into directly absorbable, energy filled organic fertilisers. Testing confirms that plants grown in soil with BIO VEGA and BIO FLORES fertilisers grow faster and yield heavier harvests than any other organic brand.

BIO VEGA

BIO VEGA is a one part certified 100% organic soil nutrient for the growing phase of the plant. It is rich in large quantities of directly absorbable betaine nitrogen. This biological form of nitrogen guarantees unsurpassed absorption right from the start. In addition to being a premium, organic based nutrient BIO VEGA is loaded with fruit acids and oligosaccharides for improved nutrient uptake and plant performance. Research proves that plants fertilised with BIO VEGA grow faster with larger, greener leaves.

BIO FLORES

BIO FLORES is a one part certified 100% organic soil nutrient rich in hop extracts for the blooming phase of the plant. Hop is a member of the Hemp family that has grown wild since ancient times. Our hop extract includes magnesium, proteins and other active constituents like alpha and beta bitter acids in their directly absorbable state and therefore ensures better flower development with larger, more colourful flowers and an enhanced scent and flavour.

TRY IT FOR YOURSELF TODAY

Try the certified 100% organic BIO VEGA and BIO FLORES fertilisers and the BIOCANNA® range of high performance plant products for yourself today from selected gardening outlets. BIO VEGA and BIO FLORES fertilisers are available in 250mL and 1L sizes. The manufacture of BIO VEGA and BIO FLORES nutritional plant products occurs in Holland under extreme laboratory conditions. Testing in our own laboratories prior to bottling and export ensures full formulation compliance.
