

BRIX+

BRIX+ is a unique formula designed to achieve MAXIMUM yield. Scientifically designed using only the best ingredients. BRIX+ is readily available for direct absorption into your favourite flower or herb.

HOW TO USE BRIX.

Foliar Application -

BRIX+ is ready to apply straight out of the bottle onto your plants.
10 days prior to harvest & with the lights off, spray plant until runoff occurs.
Repeat application 5 days prior to harvest.
One day prior to harvest spray with water only.

Wet Cure Application -

BRIX+ is ready for application straight out of container.
Pour BRIX+ into a suitable container (i.e. Bath tub, Large Tub, etc).
Place material to be treated directly into BRIX+ & gently agitate for 10 minutes.
Remove plant material & dry well in ventilated area.
1 Litre of BRIX+ will treat up to 2000 gms of freshly pruned organic matter.

HOW DOES BRIX+ WORK?

Brix+ is full of natural carbohydrates, a unique natural wetting agent, naturally derived amino acids, enzymes, and proven biological yield enhancers. This formula allows for super carbo-loading of flowers, which increases net weight, density & structure, all of which results in a huge increase in overall weight of your crop

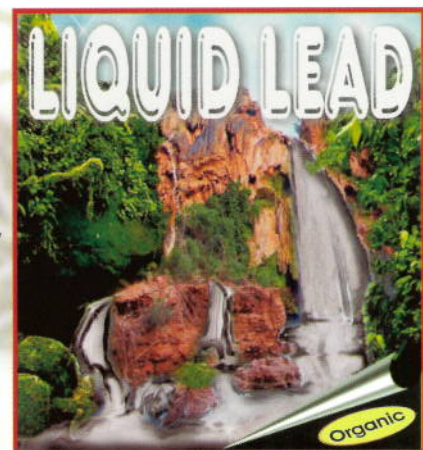

LIQUID LEAD

LIQUID LEAD contains a special formula precisely designed for the HEAVIEST HARVEST!
LIQUID LEAD is a unique blend of organic enzyme activators, amino acids, vitamins, natural wetting agents, carbohydrates and scientific flowering activators that will unleash the full flowering potential of your favourite plants or herbs.

HOW TO USE LIQUID LEAD.

To get the most from your flowering plants, start using LIQUID LEAD 3 weeks prior to harvest. Add 2.5 mls per litre of water along with quality flowering nutrient

Another great application for LIQUID LEAD is for a second harvest.
2 days after the first harvest apply LIQUID LEAD at 2.5 mls per litre along with quality flowering nutrient.
