

PHILIPS LED BAR

For single line installation

For double line installation

PHILIPS LED BAR IS THE IDEAL ENERGY-EFFICIENT SOLUTION FOR LIGHTING IN BETWEEN THE PLANTS. THE GREENPOWER LRD MODULES GIVE OFF VERY LITTLE HEAT AND SO REQUIRE NO ACTIVE COOLING. THEY ARE SIMPLE TO INSTALL IN ANY NEW OR EXISTING GREENHOUSE. THE LED INTERLIGHTING MODULES HAVE LEDS ON BOTH SIDES, SO THEY CAN LIGHT TWO ROWS OF PLANTS AT ONCE. DEPENDING ON THE REQUIRED LIGHT LEVEL, TWO OR MORE MODULES CAN BE POSITIONED ABOVE ONE ANOTHER.

GREENHOUSE GROWERS ARE NOW HAVING SUCCESS NOT ONLY WITH TOMATOES, BUT ALSO CUCUMBERS, CAPSICUMS AND ROSES WITH INTERLIGHTING. THESE PLANTS BENEFIT FROM SMARTER USE OF LIGHT DISTRIBUTION, COLOUR AND HEAT PROPERTIES AND EFFICIENT LED LIGHTING. IN COMBINATION WITH THE USE OF OVERHEAD HID LIGHTING, PLANTS ARE DOING VERY WELL AND INCREASE IN PRODUCTION IS HIGHER THAN EXPECTED.

LENGTH: 2.48 METRE

POWER: 115 WATTS

**AVAILABLE FROM:
EXCEL DISTRIBUTORS P/L
PH: 03 9495 0083**
